Algorithm

Client

- 1. Create socket
- 2. Read the matrices from the standard input and send it to server using socket
- 3. Read product matrix from the socket and display it on the standard output
- 4. Close the socket

Server

- 1. Create socket
- 2. bind IP address and port number to the socket
- 3. Read the matrices socket from the client using socket
- 4. Find product of matrices
- 5. Send the product matrix to the client using socket
- 6. close the socket

Client program

```
#include<stdio.h>
#include<string.h>
#include<sys/socket.h>
#include<sys/types.h>
#include<netinet/in.h>
#include<arpa/inet.h>
#include<fcntl.h>
#include<stdlib.h>
main(int argc, char * argv[])
{
int i,j,n;
int sock fd;
struct sockaddr in servaddr;
int matrix_1[10][10], matrix_2[10][10], matrix_product[10][10];
int size[2][2];
int num rows 1, num cols 1, num rows 2, num cols 2;
if(argc != 3)
fprintf(stderr, "Usage: ./client IPaddress of server port\n");
exit(1);
}
printf("Enter the number of rows of first matrix\n");
```
